

FOUNDATION ELEVATION BENCHMARK REPORT

Prepared By:

Robb Hill
Foundation Assessment Consultant
Inspection Pros

Date of Report:

03/19/2026

PURPOSE

This report establishes baseline foundation elevation measurements for a newly constructed residential structure. The data is intended to serve as a benchmark for future comparison to evaluate potential movement or settlement.

SCOPE OF SERVICES

Relative elevation readings were obtained using a leveling instrument. Measurements are referenced to an established benchmark (0.00) and were collected at representative interior and perimeter locations. Data reflects conditions at the time of survey only.

FOUNDATION DESCRIPTION

Foundation Type: Slab-on-grade
Structure Type: Residential
Construction Status: New construction

BENCHMARK REFERENCE

All elevations are reported relative to a designated benchmark (0.00) within the structure. This reference point is intended for use in future comparative surveys.

LIMITATIONS

Elevations are relative and not tied to a geodetic datum. Measurements were taken at accessible locations only. No destructive testing or structural analysis was performed.

DISCLAIMER

This report documents baseline elevation conditions only and does not constitute a structural engineering evaluation. No warranty or guarantee is expressed or implied regarding future foundation performance.
